

The [Washington State Noxious Weed Control Board](#) is a great resource to learn more about invasive species that Skagit Land Trust is working to remove from Trust properties. Below is a list of common invasive species that have been found on Samish Island.

Please be on the lookout for these plants in your back yard and when you visit Samish Flower Farm. These invasive species choke out native plants and reduce the health of the habitat in which they are present.

English Ivy

Himalayan Blackberry

Evergreen Blackberry

Yellow Archangel

Canadian Thistle

Bull Thistle

Herb Robert

Spurge Laurel

Poison Hemlock

Shiny Geranium

English Holly
